## Dworzec Główny (Main Railway Station)

In the following years lines to Świebodzice (1843) and Legnica (1844) were led out of Wrocław, both ended with separate stations. In 1848 all Wrocław terminal stations (Górnośląski, Świebodzki and Marchijski) were connected. Although originally wagons were shunted between them by horse-drawn carriages, this is how the Wrocław railway network began to develop. The route of the former connecting track is commemorated in the field on the western side of the contemporary station hall. The representative station building in a pseudo-historic-secession style dates back to 1856. The railway station was thoroughly rebuilt in 1905, when one track crossing the city at street level was replaced by three tracks located on an overpass, 5 platforms were built (still in use today), including 4 island platforms covered by a huge steel hall. Access to the platforms led through 2 tunnels, also still in use today. Between the passenger platforms there are lower and narrower technical platforms, which until the 1980s were used by the post office and luggage carts. The building of Wrocław Główny railway station along with the platforms and platform hall is entered in the register of monuments. The former Upper Silesian Railway Station has fallen into ruin, but people can see it through the fence. From the eastern edge of the platforms of the current station you can see the former postal platforms, used until the 1990s. The railway station together with the surrounding public transport stops and bus station creates an efficient transfer center. Wrocław Główny is the largest passenger railway station in Poland, with 460 train stops per day, and a passenger rate at 78640 people per day in 2024. Currently trains stop at 6 platforms with 10 platform edges. It is Poland's oldest active station and has the largest train shed.

All CPs are in publicly accessible locations or are clearly visible from them. When moving near railroad tracks be extra cautious and remember that trespassing is prohibited and not necessary.

On the map of Wrocław Główny railway station and its surroundings various places that are marked with circles and numbers determine control points (CP). Each of them has an associated image listed below. Matching images to CPs confirms the completion of the route. The answers should be returned to the organizer.

Route length: 2 km  
Number of CPs: 22

tram stop	police	WC
bus stop	post office	elevator
fountain	religious figure	
railroad water crane	memorial	
tourist information	railway information	
library (upstairs)	other object	
BWA Wrocław Główny art gallery (upstairs)
